

10KW solar energy investment

Overview

On average, a 10kW solar system should cost between \$12,500 and \$17,500. This price range includes the cost of installation, permits, and other miscellaneous fees. Other factors that affect cost are the size of your home, your location, the type of solar panels and the installation company. How much does a 10kW Solar System cost?

Nationwide, an average 10kW solar energy system costs roughly \$21,000 after a 30% tax credit. The average 10kW solar panel system can pay for itself in a little over eight years. If you're interested in going solar, it's often easier to work with a professional solar installer to ensure you get the right size system for your needs.

What is a 10kW solar energy system?

A 10kW solar energy system can provide all the electricity the average home needs and probably more. In other words: The excess energy produced by your solar panels can be sent back to the grid, allowing you to make money from it. If you're connected to the power grid, a 10kW solar panel array can functionally offset all of your utility energy use.

How many solar panels does a 10kW Solar System have?

The average 10kW solar system has around 40 solar panels installed. But the number of panels can range from 30 to 60, depending on the size and power of the panels. A 10kW system is a pretty big system, and it'll usually take up around 400 square feet of space.

How much does an off grid 10kW Solar System cost?

The average cost of an off grid 10kW solar system is \$19,000. This price includes the cost of installation and the panels themselves. However, it does not include the cost of batteries, which can range from \$2,000 to \$10,000 depending on the type and size of battery you choose.

Can a 10 kilowatt solar system save you money?

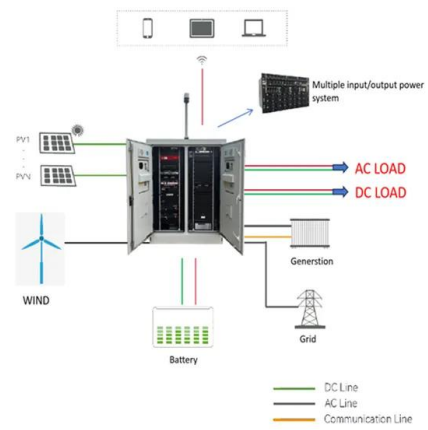

If you've been considering solar, you're probably curious about costs —and maybe a little envious of neighbors who've already made the switch and are enjoying lower electric bills. A 10 kilowatt (kW) solar panel system can help power your home while reducing monthly utility costs.

Can a 10kW Solar System power a small home?

A 10kW solar system can power a small home or a large RV. If you have a small home, you may be able to get away with powering everything with a 10kW system. However, if you have a larger home, you will likely need a larger solar system. The size of your home is not the only factor that determines how much power you will need.
