

18V 2W solar panel

Overview

What is an 18W solar home lighting system?

An 18W Solar Home Lighting System is the smallest capacity solar lighting system for a home to use sunlight for running the CFLs. The system comes with a wide range of specifications at affordable prices. It is a compact and easy-to-install system that can provide a battery backup of up to 6 hours.

What is a 12V 10W solar panel?

An ideal panel for steady battery charging and maintenance or your small off grid lighting project. This high quality 12v 10w Solar Panel works in both sunny and overcast conditions and is fully weatherproof. Comes supplied with 2 meters of cable, a blocking diode to prevent reverse charging and crocodile clips for easy battery connection.

What is the difference between 18v and 12V solar panels?

Batteries are nearly always rated at 12V. 18V solar panels are often used with 12V batteries to ensure the current always flows from the higher potential (solar panel) to the lower (battery) and not the other way. However, panels compatible with 12V batteries are often referred to as 12V solar panels.

Why should you choose swct® solar modules?

Thanks to our in-house developed and patented Heterojunction/SmartWire technology (SWCT®), our solar modules achieve higher energy yields over the same area as modules with standard technology. As one of very few manufacturers, we have an IEC-certified module testing center.

Where are solar panels made?

Designed in Switzerland, developed in Germany and manufactured sustainably. installed by experts. We have been sun worshippers from the very beginning – for over 40 years, we have been working to transform the clean and endless energy of the sun into sustainable electricity.
