

# **Capacity ratio of photovoltaic energy storage system**

## Overview

---

What is the optimal configuration of energy storage capacity?

The optimal configuration of energy storage capacity is an important issue for large scale solar systems. a strategy for optimal allocation of energy storage is proposed in this paper. First various scenarios and their value of energy storage in PV applications are discussed. Then a double-layer decision architecture is proposed in this article.

What is the peak-to-Valley ratio of a PV-HES system?

Under certain peak-to-valley ratios, such as 1.1:1:0.8, 1.1:1:0.7, and 1.1:1:0.6, only one storage technology is applied in the building energy system. 4.3. The effects of capacity and COP of heat pump on the system performance of the PV-HES system.

Does peak-to-Valley ratio affect storage capacity optimization?

Furthermore, an analysis of the impacts of the peak-to-valley ratio for the time-of-use (TOU) tariff on storage capacity optimization for the PV-HES system demonstrates that the valley price ratio has a greater impact on the NPC than the peak price ratio for the PV-HES system.

How is energy storage capacity calculated?

The energy storage capacity,  $E$ , is calculated using the efficiency calculated above to represent energy losses in the BESS itself. This is an approximation since actual battery efficiency will depend on operating parameters such as charge/discharge rate (Amps) and temperature.

What is the optimal capacity of PV-BES system under different Lscrs?

Fig. 7 illustrates the system performance of the PV-BES system under different LSCRs. As shown in Fig. 7 (a), the optimal capacities of the BES for LSCRs of 0.1 and 0.2 are the same, at 531.75 kWh. When the LSCR ranges from 0.3 to 0.9, the optimal capacity of the BES system increases to 714.33 kWh.

How can energy storage configuration be optimized?

Consequently, the optimal energy storage configuration is obtained by minimizing the net present cost (NPC), which includes initial investment (IC), operation cost (OPC) and replacement costs (RC), as calculated by Eq. (24). Due to the relatively small impact of system maintenance costs, they are neglected in this study.

## Capacity ratio of photovoltaic energy storage system
