

# Check the base station wind power supply current

## Overview

---

How does distributed wind energy work?

They can be owned and run by a utility company that then sells the power the plant makes to users, like homeowners, who connect to the electrical grid. Distributed wind energy describes wind energy projects that serve local energy demand generating on-site electricity for homes, schools, businesses, and farms.

Where can I find wind resource data?

Explore wind resource data via our online geospatial tools and downloadable maps and data sets. Access our tools to explore wind geospatial data for the contiguous United States and several international regions and countries.

How does DOE support wind energy research & development?

The U.S. Department of Energy (DOE) has been a global leader in supporting critical wind energy research and development (R&D) for decades, helping usher in commercial wind energy production. This funding has contributed to the rise of today's wind energy sector. DOE's Wind Energy Technologies Office (WETO) funds wind energy R&D activities that.

What is a land-based wind energy project?

Land-based, utility-scale wind energy projects use highly efficient, state-of-the-art wind turbines that generate cost-competitive electricity at power-plant scales. They can be owned and run by a utility company that then sells the power the plant makes to users, like homeowners, who connect to the electrical grid.

Can wind turbines be used as a distributed energy resource?

Wind turbines used as a distributed energy resource can be connected at the distribution level of an electricity delivery system (or in off-grid applications) to serve on-site energy demand, or support operation of local electricity

distribution networks.

How can we advance wind energy?

Advancing U.S. wind energy requires regular collaboration with government agencies, academic institutions, small businesses, nonprofits, environmental groups, states, Tribal nations, communities, the international research community, and other industry stakeholders to identify and address challenges that face the wind energy sector.
