

Denmark installs solar photovoltaic panels

Overview

In 2012, new photovoltaic installations had surged to unprecedented levels in Denmark. This twentyfold increase in photovoltaic capacity in only one year urged the Danish government to cut back its net-metering scheme.

Solar power in Denmark amounts to 4,208 MW of grid-connected PV capacity at the end of March 2025, and contributes to a government target to use 100% renewable electricity by 2030 and by.

Solar power provided 1.4 TWh, or the equivalent of 4.3% or 3.6% of Danish electricity consumption in 2021. In 2018, the number was 2.8 percent. Denmark has lower solar insolation than many countries closer to Equator, but lower temperatures.

• • • • • .

Solar heat plants are widespread in Denmark, with a combined heating capacity of 1.1 GW in 2019. A large solar-thermal district heating plant 55% of the year.

Denmark deployed 545 MW of solar in 2024, including rooftop pv system and ground pv system all together, according to figures from Dansk Solcelleforening. The nation added 545 MW of solar last year, up from 378 MW in 2023 but down from more than 1 GW in 2022.
