

Dominican communication base station hybrid energy generation

Overview

How does the Dominican Electricity Company work?

The Dominican Transmission Electricity Company operates interconnected transmission and runs high-voltage electric transmission projects, while state-owned distribution companies serve three regions of the country.

Does the Dominican Republic have solar power?

In addition to these grid-tied projects, the Dominican Republic has several distributed solar projects to provide power in off-grid locations. The Dominican Republic has high wind potential and already boasts several utility-scale wind projects.

Does the Dominican Republic have electricity?

Like many island nations, the Dominican Republic is highly dependent on imported fossil fuels, leaving it vulnerable to global oil price fluctuations that directly impact the cost of electricity. Before 1997, the electricity market in the Dominican Republic was regulated and state-owned.

How much does energy cost in the Dominican Republic?

This profile provides a snapshot of the energy landscape of the Dominican Republic, a Caribbean nation that shares the island of Hispaniola with Haiti to the west. In 2014, the Dominican Republic's utility rates were approximately \$0.19 per kilowatt-hour (kWh),¹ below the regional average of \$0.33/kWh.

What is the largest generator in Dominican Republic?

The largest generator in the country is the private AES Andros with 15.64% of total energy generated, followed by the state-owned Empresa de Generación Hidroeléctrica at 13.62% and Empresa Generadora de Electricidad at 12.08%.⁸ The Dominican Corporation of State Electricity Companies (Corporación Dominicana).

What happened to the electricity market in the Dominican Republic?

Before 1997, the electricity market in the Dominican Republic was regulated and state-owned. In 1997, the markets were reformed to allow private companies to participate in the generation and distribution of electricity.

Dominican communication base station hybrid energy generation

[Hybrid power system for a remote microwave repeater site in the](#)

These repeater sites are powered by various combinations of power sources including solar photovoltaic, wind turbines, diesel generating sets, and grid-connected AC power, in both ...
