

# Energy storage container price trends

## Overview

---

The ESS Price Forecasting Report provides a five-year forecast for the price of a DC battery container, including battery cells, modules, racking, and additional balance of system needed for a containerized battery system. The Q1 2025 report covers pricing outlook updates through March 2025. Why are energy storage costs so high – irrational?

Within energy storage, fears of critical raw material shortages in the face of soaring EV demand (with growth rates of 60%) led to “irrational buying behaviour”, Shreve said, leading to a 270% increase in lithium carbonate costs from Q3 2021 to Q4 2022.

How much does a Bess container cost in 2024?

The average 2024 price of a BESS 20-foot DC container in the US is expected to come down to US\$148/kWh, down from US\$180/kWh last year, a similar fall to that seen in 2023, as reported by Energy-Storage.news, when CEA launched a new quarterly BESS pricing monitor.

How can a battery module reduce DC container production costs?

Battery module balance of system component integration and cell/module testing likewise are being automated to increase production throughput. These capital investments have a meaningful impact and can lower DC container production costs by more than US\$10/kWh.
