

Home fully automatic intelligent inverter

Overview

What is a smart inverter?

A regular inverter simply converts DC to AC power for basic backup. A smart inverter, however, does much more, it comes with smart artificial intelligence that allows real-time energy monitoring, remote control via mobile apps, grid communication, and load management. It can optimise energy usage and even feed power back to the grid.

What is a hybrid inverter?

Hybrid inverters are essentially two inverters in one; they combine a solar inverter and a battery inverter into one simple unit. These advanced inverters use solar energy to power your home, charge a battery or send excess energy into the electricity grid. Most hybrid inverters can also provide emergency backup power during a blackout.

How to install a smart inverter?

Installing a smart inverter is quite straightforward if done by a certified professional. It involves connecting the inverter to your battery or solar system, and then syncing it with your home Wi-Fi network for app-based control. Most AI inverters come with step-by-step setup guides and user-friendly apps.

What are the best smart inverters in 2025?

Here are the best smart inverters in 2025 that come with remote monitoring, app control, and safety features, making them smarter and more reliable than conventional models. The Livguard smart inverter does more than power your home, it simplifies your life.

How do I choose a solar inverter & panel system?

Several essential factors should be considered when choosing a solar inverter and panel system. These factors will help you select a setup that meets your

energy needs, integrates with your smart home, and maximizes efficiency and reliability. Check the system's energy efficiency ratings and power output.

What size smart inverter do I Need?

The size of the smart inverter you need depends on your power backup requirements and appliance load. For basic home use (lights, fans, TV), a 1-2 kVA inverter may suffice. For larger homes with high-power appliances or solar integration, you might need 3-5 kVA or higher.
