

How expensive is EMS for communication base stations

Overview

Should EMS cost be standardized?

Standardizing the calculation of EMS cost will allow comparisons of costs between studies, communities, and interventions. The authors would like to acknowledge the outside reviewers of this framework: David Cone, MD; Alastair Fischer, PhD; Manish N. Shah; Robert Swor, MD.

How do you determine the cost of an emergency medical services system?

To determine the cost of an emergency medical services (EMS) system, researchers, policymakers, and EMS providers need a framework with which to identify the components of the system that must be included in any cost calculations. Such a framework will allow for cost comparisons across studies, communities, and interventions.

Are EMS costs independent?

The cost of EMS and the cost and effects of health care outside the EMS setting are not entirely independent. For example, an intervention provided in the out-of-hospital setting may reduce the cost of subsequent hospitalization. Users of this framework can adopt any perspective desired.

Is there a methodology for evaluating EMS costs?

However, a methodology for evaluating cost within an EMS system, developed by the American Ambulance Association, was identified. ³³ Although this methodology was designed for use by a single EMS agency and was not comprehensive enough for determining EMS costs from a societal perspective, it was used to refine the comprehensive cost framework.

How do EMS metrics help explain service delivery costs?

Each of these metrics, tracked over time, can be very useful in explaining service delivery costs to stakeholders. EMS systems are essentially funded from two buckets: Fee for service (FFS) revenue and tax subsidies.

What is the EMS cost analysis project?

The objective of the EMS Cost Analysis Project is to create a comprehensive framework that allows users to determine the cost of providing out-of-hospital care from a societal perspective. This article presents the EMS cost framework that has been developed. A panel (the authors) was assembled to generate an EMS cost framework.
