

How much does a dedicated solar inverter cost

Overview

A solar inverter costs \$2,000 on average, with prices ranging from \$800 to \$5,000 —though the overall price is wrapped up in your solar panel installation. The size of your system, the type of inverter, and the efficiency rating affect your final cost. How much does a solar inverter cost?

You can expect to spend \$0.15 to 0.24 per watt on a solar inverter, excluding installation costs. Smaller inverters for DIY systems cost less than \$500, while large inverters can cost more than \$3,000. Use a solar panel inverter size calculator to determine the right size for your system. There are three main types of solar inverters for your home.

How much does a string inverter cost?

String inverters cost \$800 to \$2,500 on average. Most homes only require a single inverter, but you could need up to three if you have a larger-than-average residential solar energy system. String inverters work by connecting several solar panels, which send their electricity to a central point where the inverter converts the power.

How many solar inverters do I Need?

Most homes only require a single inverter, but you could need up to three if you have a larger-than-average residential solar energy system. String inverters work by connecting several solar panels, which send their electricity to a central point where the inverter converts the power. String inverters are the most affordable option.

Can a solar system be powered by multiple microinverters?

This technology lets you have a system powered by multiple microinverters instead of a single string inverter. By converting new clean energy into alternating current as soon as it's generated by each solar panel, microinverters can help you avoid some of the power capacity losses associated with string inverters.

How much does a microinverter cost?

Microinverters cost an average of \$150 to \$300 each, but you'll need one for each solar panel in your system. They're installed on the underside of each panel and immediately convert electricity as soon as it's generated, helping increase efficiency by limiting energy loss. Microinverters are popular because they perform well in areas with shade.

What inverter do I need for a hybrid solar system?

Be sure to confirm inverter compatibility if you're installing a hybrid solar system tied to the grid that also uses a battery bank. The two most common inverters are string inverters and microinverters. String inverters install easily and connect several panels together, but one panel's failure affects the whole circuit.
