

# How much is the investment in energy storage projects

## Overview

---

What is the capital cost of an energy storage system?

**Capital Costs** The capital cost of an energy storage system is the total value of all of the initial equipment purchased for the project. This is derived from adding the cost of all of the subassemblies and components needed to construct the final version of the product, many times described internally as a Bill of Material (BOM).

Are energy storage systems a good investment?

This is understandable as energy storage technologies possess a number of inter-related cost, performance, and operating characteristics that and impart feed-back to impacts to the other project aspects. However, this complexity is the heart of the value potential for energy storage systems.

Are energy storage costs over-runs?

Engineering, Procurement, and Construction (EPC) costs have historically been subject to significant over-runs due to the small body of experience deploying energy storage systems. Overall, the base expense and the variance in possible costs ranges are expected to continue to decline as experience grows. 2.4.4.1. Project Development.

Which energy storage technologies are included in the 2020 cost and performance assessment?

The 2020 Cost and Performance Assessment provided installed costs for six energy storage technologies: lithium-ion (Li-ion) batteries, lead-acid batteries, vanadium redox flow batteries, pumped storage hydro, compressed-air energy storage, and hydrogen energy storage.

Should energy storage projects be developed?

However, energy storage project development does bring with it a greater number of moving parts to the projects, so developers must consider

storage's unique technology, policy and regulatory mandates, and market issues—as they exist now, and as the market continues to evolve.

Are energy storage projects different than power industry project finance?

Most groups involved with project development usually agree that energy storage projects are not necessarily different than a typical power industry project finance transaction, especially with regards to risk allocation.
