

Independent energy storage project in Finland

Overview

The world's largest sand battery has been inaugurated in Finland, capable of storing vast amounts of energy generated from renewable sources like solar and wind. The 13-metre-tall structure, which is situated in the southern municipality of Pornainen, is able to store up to 100 MWh of energy. Who owns a 50MW battery energy storage project in Finland?

Nala Renewables, a global power and renewable energy platform and independent power producer, has entered into an agreement to acquire a 50MW, ready-to-build battery energy storage (BESS) project in Finland from Fu-Gen AG, a Swiss-based renewables developer and independent power producer.

Does Finland have energy storage?

This paper has provided a comprehensive review of the current status and developments of energy storage in Finland, and this information could prove useful in future modeling studies of the Finnish energy system that incorporate energy storages.

Where is the largest battery energy storage system in Finland?

SEB Nordic Energy's portfolio company Locus Energy, in collaboration with Ingrid Capacity, proudly announces the groundbreaking of one of Finland's largest battery energy storage system (BESS) in Nivala Municipality, Northern Ostrobothnia.

Is energy storage a viable solution for the Finnish energy system?

This development forebodes a significant transition in the Finnish energy system, requiring new flexibility mechanisms to cope with this large share of generation from variable renewable energy sources. Energy storage is one solution that can provide this flexibility and is therefore expected to grow.

Is energy storage the future of wind power generation in Finland?

Wind power generation is estimated to grow substantially in the future in Finland. Energy storage may provide the flexibility needed in the energy transition. Reserve markets are currently driving the demand for energy storage systems. Legislative changes have improved prospects for some energy storages.

Which energy storage technologies are being commissioned in Finland?

Currently, utility-scale energy storage technologies that have been commissioned in Finland are limited to BESS (lithium-ion batteries) and TES, mainly TTES and Cavern Thermal Energy Storages (CTES) connected to DH systems.
