

# Italian photovoltaic panel manufacturer

Warranty  
**10 years**

LiFePO<sub>4</sub>

Intelligent BMS

Wide Temp:  
-20°C to 55°C

## Overview

---

Who makes industrial photovoltaic solar panels?

Trienergia produces industrial photovoltaic modules suitable for large-scale installations to improve the energy efficiency of companies, commercial and industrial. Trienergia is a manufacturer of state-of-the-art photovoltaic solar panels with innovative design, capable of ensuring high efficiency and better performance.

Which material is used in photovoltaic technology?

Crystalline silicon is the dominant semiconducting material that is used in photovoltaic technology for the production of solar cells. These cells are then assembled into solar panels as part of a photovoltaic system to generate solar power from sunlight.

How does a photovoltaic system work?

A photovoltaic system is able, thanks to its modules (PV panels), to convert solar energy directly into electrical energy through the photovoltaic effect. The latter is given by the photovoltaic cells that allow light radiation to free electrons from semiconductor materials, such as silicon, charging them electrically.

How do photovoltaic panels produce electricity?

The latter is given by the photovoltaic cells that allow light radiation to free electrons from semiconductor materials, such as silicon, charging them electrically. Doing so, the photovoltaic panels produce electric energy. The direct electric current, thus produced, reaches the inverter, a device that transforms it into alternating current.

What is a trienergia photovoltaic module?

Trienergia photovoltaic modules are made exclusively from high-quality components and incorporate state-of-the-art MWT Back-contact technology.

These modules offer 20 percent higher efficiency than conventional modules and provide greater reliability by eliminating solder spots thanks to ribbon-less technology.

What are energyglass photovoltaic components?

EnergyGlass photovoltaic components are designed and manufactured to optimally meet the needs of architectural integration, where transparent or opaque glass is used as a building element.
