

Large capacity and safe outdoor power supply

Overview

What is the best portable power station?

The Jackery Explorer 1500 Portable Power Station is our recommendation for the overall best portable power station. With a large battery capacity that can power a television for 21 hours and a variety of outlets and ports, it's suitable for home emergencies, camping, and job site use.

Should you buy a portable power station?

The term “portable” is stretching it sometimes. Batteries are heavy. The larger-capacity power stations are typically on wheels and have telescopic handles, and they are still tough to cart around. If you’re looking for something you can actually carry on foot for a distance, you may need to temper your expectations on capacity.

What is a portable power station & why should you use it?

This portable power station is great for photographers and other content creators, since it’s very lightweight and has fast USB charging for cameras and video cameras, and it’s especially good for charging up drones. It’s quiet, too, so you don’t need to worry about annoying anyone when using it in the field.

Can you take a portable power station camping?

You can take any good portable power station camping and get good use out of it, as long as you don't mind closely monitoring your power usage. The difference with the Jackery Solar Generator 1000 is that it comes with two of Jackery's powerful SolarSaga 100X solar panels that can charge the battery in about eight hours.

Should you buy a power brick or a portable power station?

Small power bricks have enough juice to charge your phone a few times, while a cooler-sized portable power station can keep vital electronics running during

a power outage or camping trip, and the most powerful options will provide electricity to your entire house.

What can a portable power station charge?

All portable power stations can charge up small gadgets like phones and laptops or be used to power lighting. Most can handle small appliances like mini-fridges or TVs. If you want to use power tools, an AC unit, or in the UK, a kettle, you need to be able to draw thousands of watts.
