

Mauritania Hybrid Energy Storage Project

To Strive forward No Energy Waste

- ✓ All in one
- ✓ 100~215kWh High-capacity
- ✓ Intelligent Integration

Overview

The World Bank Group today approved the Mauritania Development of Energy Resources and Mineral Sector Support Project—known as the DREAM Project—to boost green hydrogen development, expand energy storage, and support critical reforms in the mining sector. Why should Mauritania invest in a battery energy storage facility?

The project will finance Mauritania's first large-scale battery energy storage facility, enabling the country to harness its abundant solar and wind resources for more reliable electricity. This investment is critical to the success of Mauritania's Mission 300 Energy Compact, which aims to achieve universal access to electricity by 2030.

What is Mauritania's dream project?

NOUAKCHOTT, March 27, 2025 - The World Bank Group today approved the Mauritania Development of Energy Resources and Mineral Sector Support Project —known as the DREAM Project —to boost green hydrogen development, expand energy storage, and support critical reforms in the mining sector.

How does Mauritania contribute to energy security?

Through these multilateral partnerships, Mauritania affirms its commitment to continue implementing development projects that achieve its vision of energy security, in a way that serves the interests of citizens and enhances its capabilities in attracting investments.

Will Mauritania become a leader in green energy?

"This project will position Mauritania as a leader in critical minerals, green hydrogen and energy storage, —driving job creation and expanding economic opportunities for all Mauritaniens," said Demetrios Papathanasiou, Global Director for Energy & Extractives at the World Bank.

Why should Mauritania invest in Dream?

This investment is critical to the success of Mauritania's Mission 300 Energy Compact, which aims to achieve universal access to electricity by 2030. DREAM is key to helping Mauritania estimate and promote its critical mineral potential through geological surveys.
