

# **Niger photovoltaic module project construction**

## Overview

---

Will a 30 MWp photovoltaic power plant improve Niger's electricity supply?

FIND IT! Mahaman Moustapha Barké, Niger's Minister of Energy, has announced the commissioning of a 30 MWp photovoltaic solar power plant. The infrastructure, located around ten kilometres from the capital Niamey, was built under the aegis of Nigerien Electricity Company (NIGELEC) with a view to improving the city's electricity supply.

Does Niger have utility-scale PV systems?

While there is considerable experience of PV systems in Niger, there are no utility-scale PV systems. Most of the PV systems in Niger are off-grid. However, there is growing interest in investor and policy-making circles in taking advantage of the potentially major economies of scale of PV-based grid developments.

How much money does Niger need to build a power station?

The construction of this power station (over a two-year period) required the mobilisation of 30 million euros (20 billion CFA francs), financed to the tune of 23.5 million euros by the French Development Agency (AFD) in the form of a loan, 5 million euros by the European Union (EU) and the remaining 1.5 million by the State of Niger.

How can Niger balance its energy mix?

This transformative project, funded by the World Bank through the International Development Association (IDA), will enable Niger to better balance its energy mix, which is currently largely dominated by thermal energy. This initiative is particularly crucial for a country that frequently faces climatic shocks.
