

# Pack battery factory investment

## Overview

---

How much money will the company invest in battery production?

To this end, the company will invest around 100 million euros over the next five years at the tradition-rich production site for combustion engines. Production capacities will be expanded to over 100,000 batteries per year. The investments in the development of battery production will secure 350 jobs with a promising future.

What is a battery factory?

Battery factories assemble the individual battery cells into a functioning battery pack with a battery management system (BMS) and thermal management system (TMS) and enclosure. Some battery pack factories also produce cells onsite, often in a joint partnership with a cell manufacturer (like Panasonic for example). CATL = 37%. China.

How much money will automakers invest in battery manufacturing?

Automakers and battery manufacturers have collectively invested and promised to invest around \$112 billion in building domestic cell and module manufacturing. Together, these companies promise to deliver an annual capacity of close to 1,200 gigawatt-hours before 2030, if each factory reaches maximum capacity.

How much money does MAN Truck & Bus spend on battery production?

MAN Truck & Bus has announced an additional €150 million investment in its battery production facility in Nuremberg, bringing total spending on battery manufacturing at the site to around €250 million. Combined with earlier investment in diesel engine production, the commercial vehicle manufacturer is allocating nearly €500 million to the site.

How much electricity does a battery factory use?

A large gigafactory can consume 2.4 GWh of electricity and 1 million gallons of

water daily. Battery factories assemble the individual battery cells into a functioning battery pack with a battery management system (BMS) and thermal management system (TMS) and enclosure.

What's going on with Chinese LFP battery packs?

Adding further complexity is the ongoing trade war. The effective duty on Chinese LFP (lithium iron phosphate) battery packs currently stands at 82%, with the potential to reach 155% if pending Section 301 actions are implemented.
