

Paraguay s new energy storage policy

Overview

What is Paraguay's new energy policy?

The New Energy Policy aims to consolidate Paraguay's position as a key player in regional energy integration, through overarching goals to strengthen the national electricity sector and key subsectors such as: electricity, binational hydroelectric entities, bioenergy, renewable alternative sources, and hydrocarbons.

Will Paraguay reshape its energy landscape by 2050?

The Paraguayan government unveiled a transformative energy policy to reshape the country's energy landscape by 2050. Signed into action by President Santiago Peña, this initiative sets the stage for Paraguay to diversify its energy generation and embrace sustainable alternatives such as solar energy, hydrogen fuel, and biofuels.

Should Paraguay rely on natural gas?

By relying on natural gas in the short term, Paraguay can reduce its dependence on coal and oil while ramping up its investments in solar, hydrogen, and bioenergy. Paraguay's ambitious energy policy is a bold step toward a more sustainable future, but it also comes with challenges.

How to strengthen the energy sector in Paraguay?

1. General energy sector Institutional strengthening: creation of the Ministry of Energy, Hydrocarbons, and Mining (MEHM) by 2024, followed by a plan to strengthen it and the public companies in the sector by 2025. Energy efficiency: creation of the Paraguayan Energy Efficiency Agency (public-private partnership) by 2030.

Can Paraguay use natural gas as a transitional energy source?

In addition to its focus on renewables, Paraguay is also looking to natural gas as a transitional energy source. The country's new energy policy includes a

project to integrate natural gas into its energy matrix. This would provide a reliable alternative to hydrocarbons while renewable technologies continue to scale.

Why is Paraguay promoting biofuels?

By promoting biofuels, Paraguay aims to cut carbon emissions and reduce its reliance on imported fossil fuels. The shift toward biofuels is part of a broader “energy transition” that the government sees as crucial to modernizing the country’s energy infrastructure.
