

# **Photovoltaic panels and prices for factories**

## Overview

---

Where did photovoltaic cost data come from?

Photovoltaic cost data between 1975 and 2003 has been taken from Nemet (2009), between 2004 and 2009 from Farmer & Lafond (2016), and since 2010 from IRENA. Prices from Nemet (2009) and Farmer & Lafond (2016) have been converted to 2024 US\$ using the US GDP deflator, to account for the effects of inflation.

How did our solar PV module manufacturing plant's financial model work?

Our solar PV module manufacturing plant's financial model was meticulously modelled to satisfy the client's requirements. It provided a thorough analysis of production costs including capital expenditures, manufacturing processes, raw materials, and operating costs.

What are polycrystalline solar photovoltaic (PV) modules?

Polycrystalline solar photovoltaic (PV) modules are a key component of solar energy systems, harnessing sunlight and converting it into electricity through the photovoltaic effect. These modules are composed of multiple interconnected solar cells, each made from polycrystalline silicon.

How do market factors affect the cost of solar panels?

The impact of market factors on the cost of solar panels is nuanced, influenced by supply and demand dynamics, technological advancements, and the competitive landscape. These elements collectively dictate the pricing strategies of manufacturers and ultimately the affordability of solar technology for consumers.

How are PV production costs modeled?

The costs of materials, equipment, facilities, energy, and labor associated with each step in the production process are individually modeled. Input data for this analysis method are collected through primary interviews with PV

manufacturers and material and equipment suppliers.

Does Mexico need a large-scale photovoltaic system?

In February 2025, Mexico has set a target to install 4.67 GW of large-scale photovoltaic (PV) capacity by 2030 as part of its renewable energy strategy. It is anticipated that this program will increase the use of solar electricity, lower carbon emissions, and improve energy security.
