

Poland s power plant energy storage ratio

CE UN38.3 MSDS

Overview

As of March 2025, the country has achieved 84% gas storage capacity while aggressively pursuing battery storage projects like the 400MW/1.6GWh BYD-Greenvolt collaboration [4]. How many GWh of energy storage capacity will Poland have by 2035?

In a bid to tackle the challenge of the growing electricity production from renewable energy sources, the Polish utility is looking to add more than 10 GWh of energy storage capacity by 2035. Its plans involve more than 80 projects, the value of which is estimated at around PLN 18 billion (\$4.7 billion).

Are power plants a foundation of the Polish energy sector?

Power plants and combined heat and power plants burning fossil fuels are a foundation of the Polish energy sector. A new version of our open database on these facilities, the starting point of all energy transition analyses, is now available at energy.instrat.pl.

How big is Poland's energy capacity?

According to data from the Energy Market Agency, at the end of November 2024, Poland's installed capacity was about 20.7 GW, growing year-on-year by almost 28 percent, and the installed capacity of wind power plants was about 10.2 GW, increasing year-on-year by about 8 percent.

Can Poland create a broad energy storage industry?

The new rules create an opportunity for Poland to create a broad energy storage industry, PSME's president said, from the development of technologies and products to the creation of jobs. In the main power market auction in 2022, battery energy storage was contracted for the first time - 165 MW to be exact.

How will Poland increase its renewable power capacity by 2027?

Poland plans to increase its renewable power capacity through the development of offshore wind farms. By 2027, Poland expects 6GW power capacity to be generated by offshore wind. Poland has looked to the world's largest players in renewable energy to help them develop the market.

What happened to energy storage in Poland?

The Energy Regulatory Office said in a report last year on electricity storage in Poland that, as a result of the main power market auctions for 2021-2028 and the supplementary auctions for 2012-2025, contracts for energy storage with a total capacity of 9.5 GW were concluded.
