## Overview

Which energy storage systems are best for commercial & commercial facilities?

AlphaESS industrial and commercial energy storage systems can provide the one-stop C&I energy storage solution for commercial and industrial facilities. Our solar PV and battery storage solution help maximize energy independence and reduce grid power demand. Residential & commercial battery energy storage systems available.

What is a C&I energy storage system?

A C&I (Commercial and Industrial) energy storage system is an energy storage solution designed for commercial and industrial applications, such as factories, office buildings, data centers, schools, and shopping centers.

What are commercial and industrial energy storage solutions?

Our commercial and industrial energy storage solutions offer from 30kW to 30+MW. We have delivered hundreds of projects covering most of the commercial applications such as demand charge management, PV self-consumption and back-up power, fuel saving solutions, micro-grid and off-grid options.

How much does a C&I battery-based energy storage system cost?

Considering these factors, a C&I battery-based energy storage system can cost anywhere from tens of thousands to hundreds of thousands of dollars or more, including installation. The best choice will depend on the specific energy requirements, as well as the affordable budget and return on investment expectations.

How much does energy storage cost?

Let's explore the costs of energy storage in more detail. Although energy storage systems seem attractive, their high costs prevent many businesses

from purchasing and installing them. On average, a lithium ion battery system will cost approximately \$130/kWh.

What are the different types of C&I energy storage systems?

The main types of C&I energy storage systems include battery-based, thermal, mechanical, hydrogen energy storage, and supercapacitors. Battery-based systems are the most commonly used type of C&I energy storage systems. They store energy using electrochemical batteries such as lithium-ion, lead-acid, or flow batteries.
