

# **Provide foreign base station communication equipment to China**

## Overview

---

What are airborne platforms & cellular base stations?

Airborne platforms may also create an airborne communications layer, relaying line-of-sight communications beyond the surface horizon. Cellular base stations provide service on each island-reef and afford cell phone and data service to ships operating within sight of the Chinese outposts.

Can China's SCS Outposts provide inter-island communications?

Shorter range, inter-island communications capabilities on China's SCS outposts are complementary to long-range communications capabilities, such as undersea fiber-optic cable or SATCOM, that may also provide inter-island connectivity.

Where are 4G cellular base stations located in China?

State-owned China Telecom installed 4G cellular communications base stations on the Chinese-held island-reefs beginning in 2015.<sup>11</sup> These cellular base stations are purportedly for use by civilians and military personnel stationed on the Chinese island-reefs, as well as by nearby fishermen or transiting ships.

Can a new mobile 5G station be mounted on a Chinese vehicle?

The new tech can be mounted on Chinese vehicles like its Type 92 Armored Personnel Carrier. Developed to facilitate large-scale drone integration into the PLA, the new mobile 5G station has been rigorously tested and is now ready for battle.

Are troposcatter communications good for military communications?

Engineers at the China Electronics Technology Group Corporation (CETC) 54th Research Institute (54th RI) asserted that troposcatter communications have a number of advantages for military communications. The 54th RI designs and builds a majority of PLA communication equipment.
