

Senegal ground solar energy system application

Overview

Is a solar energy project in Senegal the biggest in West Africa?

Work on a solar energy and battery storage project in Senegal, touted to be the biggest in West Africa once it goes live, is set to begin next month after an EPC (Engineering, Procurement and Construction) contract for its development was recently signed. The Kolda project will encompass a 60MWp PV solar plant coupled with a 90MWh storage system.

How much does a solar power plant cost in Senegal?

The paired solar power plants cost \$40.77 million, providing electricity to 540,000 people at under four cents per kWh – not only the cheapest energy in Senegal but among the most cost-effective across sub-Saharan Africa.

How much solar power does Senegal have?

As it stands, Senegal has 112 MW of installed solar, however this figure is rising exponentially year on year as investment swings in favor of green energy development and policymakers under H.E. Macky Sall's regime and others realize the benefits of the renewable source.

Why is solar energy important in Senegal?

Solar energy is central to Senegal's goal of universal electricity access by 2025, especially for rural communities. As solar production decreases, energy poverty could increase, and this could leave rural populations without reliable electricity for socio-economic activities.

Is Senegal achieving universal energy access?

With a national electricity access rate of 84%, Senegal is making progress towards universal energy access, yet more than 30% of rural communities remain disconnected from the grid.

Do solar power plants in Senegal vary over time?

They found that Senegal experiences significant variability in solar resources over time and across different locations, depending on the year and specific site conditions. Niang et al. (2023) evaluated the seasonal performance of six solar power plants in Senegal, namely Bokhol, Sakal, Malicounda, Kahone, Ten Merina, and Mekhe.
