

# **Should I buy batteries or an outdoor power supply**

## Overview

---

Which battery is best for a portable power station?

These days most portable power stations, including all those we recommend here, use LiFePO4 batteries, which are capable of holding far more cycles, which is the number of times a battery goes through a complete discharge and recharge, than older lithium-ion batteries while also being less likely to combust.

Should you use a home backup battery?

Historically, most people have relied on propane, diesel, and natural gas-powered home generators for resilience during power emergencies. But these days, homeowners are increasingly choosing a home backup battery, a cleaner alternative that offers the same peace of mind—and better financial savings.

Why should you buy a portable power station?

Bring big backup power with you with these expert-recommended portable power stations, which can store enough power to charge electronics, appliances, and more.

Should you buy a generator or a battery backup system?

Generators are more affordable to purchase but don't offer the same returns as batteries. You can often install a generator yourself, but installing a battery backup system is usually more involved, especially if you pair it with a solar panel system.

How do you maintain a portable power station?

Charge the battery regularly: To ensure that your portable power station is always ready to use, be sure to charge the battery regularly, even if you're not using it. This will help to maintain the battery's health and extend its lifespan.  
Keep the battery cool: To help extend the lifespan of the battery, be sure to

keep it cool.

How much power do you need for a portable power station?

For example, if you need to power a laptop and a smartphone, you may only need a portable power station with a few hundred watts of power. However, if you need to power a refrigerator, a television, and several other appliances, you may need a portable power station with thousands of watts of power.
