

# **Singapore s 10 billion energy storage project construction**

## Overview

---

What is Singapore's biggest battery storage project?

Singapore has surpassed its 2025 energy storage deployment target three years early, with the official opening of the biggest battery storage project in Southeast Asia. The opening was hosted by the 200MW/285MWh battery energy storage system (BESS) project's developer Sembcorp, together with Singapore's Energy Market Authority (EMA).

How much energy storage will Singapore have by 2025?

With just one project, EMA has achieved and exceeded Singapore's deployment target of 200MWh of energy storage by 2025. The target was set as part of the EMA programme, Accelerating Energy Storage Access for Singapore (ACCESS), through which the EOI solicitation was held.

Will Singapore have a 200mwh battery energy storage system by 2025?

By deploying this battery energy storage project, Singapore Energy Market Authority (EMA) has achieved and exceeded the country's goal of deploying a 200MWh energy storage system by 2025. This is the second grid-scale battery energy storage project after Wasilan Company deployed the 2.4MWh battery energy storage project in Singapore.

Where is the battery energy storage project located?

The battery energy storage project is deployed on 2 hectares of land in Jurong Island, Singapore, a highly industrialized area with most of Singapore's energy production and infrastructure.

Will Sembcorp ESS support Singapore's transition to cleaner energy sources?

Mr Ngiam Shih Chun, Chief Executive of the Energy Market Authority, said: "Energy Storage Systems (ESS) such as the Sembcorp ESS will play a significant part in supporting Singapore's transition towards cleaner energy sources. This large-scale ESS marks the achievement of Singapore's 200MWh

energy storage target ahead of time.

What is EMA doing with energy storage in Singapore?

EMA is understood to be continuing work on the ACCESS scheme, seeking to find ways to best integrate energy storage into Singapore's energy networks, which will be required for it to achieve a targeted 2GW of solar PV capacity by 2030 and for emissions to peak by that time.
