Overview

What is a PV curtain wall?

The PV curtain wall is the most typical one in the integrated application of PV building. It combines PV power generation technology with curtain wall technology, which uses special resin materials to insert solar cells between glass materials and convert solar energy into electricity through the panels for use by enterprises.

Are PV curtain walls good for commercial buildings?

Compared with ordinary curtain walls, PV curtain walls can not only provide clean electricity, but also have the functions of flame retardant, heat insulation, noise reduction and light pollution reduction, making it the better wall material for glass commercial buildings. What are the different types of PV curtain wall?

At present, there are two main technical modes of PV curtain wall: one is crystalline silicon curtain wall and the other is amorphous silicon curtain wall. Crystalline silicon curtain wall is a building material combining polycrystalline or monocrystalline silicon module array with the curtain wall.
