

Solar container farm design

Overview

What is a grow solar container farm?

The Grow Solar shipping container farms make it possible to grow delicious food 365 days a year with thousands of high-value crops like lettuces, leafy greens, herbs, roots, edible flowers, and more in just 320 sq. ft. Grow Solar Container Farm complexes are designed for all aspects of the cultivation process.

What is container farming?

Container farming is a vertical farming system that uses modified shipping containers for growing food inside without the need for power, water, sunlight or nutrients. Essentially, the container protects a controlled environment that is ideal for growing crops, providing a solution for sustainable agriculture in small spaces.

How long does a grow solar container farm take?

Grow Solar Container Farms can be configured to be stacked high and wide to accommodate growing space demand. Depending on the customers' requirements, Grow Solar Container Farms allow licensed growers to be up and operating in as little as 6 to 10 weeks.

What is vertical container farming?

With these cutting-edge technologies, container farming provides a flexible, sustainable solution to meet growing food demands and support local food production. Learn how three important systems—hydroponics, indoor grow lights, and climate control—work together to make vertical container farming possible.

Why is container farming a good solution for modern agriculture?

Container farming offers several distinct advantages, making it an ideal solution for modern agriculture. Here's why it stands out: Year-Round

Production: With a controlled environment, you can grow crops no matter the weather. This consistency leads to continuous harvests and reliable yields throughout the year.

How has container farming revolutionized agriculture?

Container farming has revolutionized agriculture by making it possible to grow food virtually anywhere. Freight Farms' Greenery™ is a cutting-edge example, leveraging advanced hydroponic systems, LED lighting, and climate control to create the ideal growing environment within a shipping container.
