

Sri Lanka s new solar power generator for home use

Overview

Is there a hybrid renewable power generation system in Sri Lanka?

In Sri Lanka, a hybrid renewable power generation system integrating the available solar and wind resources is not yet sufficiently harnessed for electricity generation. This thesis will investigate such a system in detail for a specific location.

Who makes the best solar panels in Sri Lanka?

Hayleys Solar has partnered with leading tier-1 solar panel manufacturers around the world to provide only the best solar panels in Sri Lanka. All our solar system projects are fitted with durable and conversion-efficient solar panels to ensure that our customers receive long-lasting solar systems.

How do solar generators work?

Solar generators use solar panels to capture photons from the sun and charge a battery in the generator. Before the power is extracted, an inverter changes it to alternating current electricity, which is what most appliances use today. From there, the generator can power anything that “regular” fossil-fuel electricity can.

Can a solar generator be used as a backup generator?

In reality, the solar generator is just a battery-powered generator. As long as the battery inside the solar generator stays charged, it will be able to power a few of devices as a backup generator. You can charge the battery in the generator using external solar panels, or using a wall outlet or even a car charger.

What is a solar generator?

A solar generator is a compact electronic box which has three components integrated together. There are the charge controller, batteries and an inverter. Strangely though there is no solar component in the solar generator. The solar

panels need to be purchased separately. In reality, the solar generator is just a battery-powered generator.
