

Swedish photovoltaic container manufacturer

Overview

Who makes swemodule solar modules?

Solar Modules produced at SweModule by Renewable Sun Energy Sweden AB are designed for various markets and applications. High quality production, combined with strictest process control, ensure maximum lifespan and the highest performance. Next generation goes of grid. Read about the fully solar-panel driven Villa.

What is a solarfold photovoltaic container?

at full power. The solarfold Photovoltaic Container is mobile for universal deployment with a light and versatile substructure. The semi-automatic electric drive unit manoeuvres the mobile photovoltaic system into its operating position rapidly and smoothly along a length of around 123 metres.

What is a mobile photovoltaic system?

That is why we have developed a mobile photovoltaic system with the aim of achieving maximum use of solar energy while at the same time being compact in design, easy to transport and quick to set up. This system is realized through the unique combination of innovative and advanced container technology.

How many PV modules are in a solar container?

The innovative and mobile solar container contains 196 PV modules with a maximum nominal power rating of 130kWp, and can be extended with suitable energy storage systems. The lightweight, ecologically-friendly aluminium rail system guarantees a mobile solution with rapid availability. at full power.

How many homes can a solarfold Container Supply?

The on-grid version of the solarfold container is connected directly to the public power grid and can supply up to 40 single-family homes with the

energy produced (energy requirement of 3,500 kW/year/single-family house). The solarfold on-grid container can also be expanded with various storage solutions.

What is the solarfold container monitoring app?

The free monitoring app is part of your package and enables you to monitor the solarfold Container at any time, and from anywhere. The comprehensive functionality of the app supplies data about yield, energy flow and the amount of electricity currently being fed into the grid – and all in real-time.
