

The cost of developing inverters for communication base stations

Overview

What is a photovoltaic-diesel hybrid system for mobile phone base station?

This work concerns the techno-economic study of photovoltaic-diesel hybrid system for mobile phone base station located in Oum el Bouaghi city (in southern Algeria). This system is made up mainly of a photovoltaic panel, a diesel generator, power converter and lead-acid battery.

Are solar base stations economically interesting?

Based on eight scenarios where realistic costs of solar panels, batteries, and inverters were considered, we first found that solar base stations are currently not economically interesting for cellular operators. We next studied the impact of a significant and progressive carbon tax on reducing greenhouse gas emissions (GHG).

Can hybrid PV-diesel energy system provide MBS in remote rural areas?

This work presents design and techno-economic study of hybrid PV-Diesel energy system to supply MBS in remote rural areas in Algeria. The hybrid system under consideration reduces the operating cost and limits air and noise pollution that arises from diesel generator.

How to estimate the cost of building and operating a cellular network?

A simple method for estimating the costs of building and operating a cellular mobile network is proposed. Using the empirical data from a third generation mobile system (WCDMA), it is shown that the cost is driven by different factors depending on the characteristics of the base stations deployed.

What is a Base Transceiver Station (BTS)?

Base transceiver station (BTS) connects between mobile phone and the subsystem network. The transceiver station is composed of tower, BTS cabinet, fuel tank and two generating sets coupled together (the second generator as a backup power for the continuous generation when the first it is

not running).
