

# **The largest battery energy storage power plant**

## Overview

---

On June 29, 2018 Vistra Corp announced that it planned on building at the Moss Landing Power Station site, what became the world's largest commercial electric battery energy storage site.

The Moss Landing Power Plant is a powered generation plant as well as a , located in , United States, at the midpoint of . As of 2025 , the.

The plant has power lines that connect it to , and interconnections like and that allow power to flow to far-away regions. The plant is also connected to local.

Utilities in California are required by a 2013 law to provide significant battery storage by 2024. The Moss Landing Power Plant site has.

In 1949, (PG&E) began construction on the Moss Landing Power Plant. Five natural gas and oil powered steam units were built during the 1950s. Commercial.

Both the supercritical units and the combined cycle units use once-through cooling. The supercritical units have a cooling requirement of 600,000 US gallons (2,300 m ) per.

The California Energy Commission (CEC) has given the green light to the Darden Clean Energy Project (DCEP), now officially the largest battery energy storage system in the world once completed joining a list of massive BESS projects being constructed around the world.
