

# Vanuatu solar photovoltaic panel project

## Overview

---

Vanuatu has launched its largest solar farm as part of a \$117 million project to cut greenhouse gas emissions and reduce electricity costs. Located in Port Vila, the solar farm will provide 7.2 megawatts of renewable energy, significantly boosting the capital's power infrastructure. What is a Vanuatu solar PV system?

This project is aligned to the Government of Vanuatu's National Energy Road Map for increasing the energy access for rural communities in Vanuatu. The installed solar PV system is a stand-alone 230/400 VAC 50Hz solar micro-grid combined with 48V batteries operating 24 hours and 7 days a week.

Why is Vanuatu launching a solar farm?

The project underscores the Vanuatu government's commitment to decarbonising the electricity supply and aligning with international climate change goals. Notably, this solar farm represents the final direct-to-grid PV installation that can operate without an accompanying battery. Future projects will necessitate energy storage solutions.

Will solar water pumping work in Vanuatu?

The two-year project, led by the Global Green Growth Institute (GGGI), will bring solar-powered water pumping systems to eight rural communities across Vanuatu's Santo, Paama, Tanna and Malekula islands, improving water security and sanitation for over 4,700 people.

Does Vanuatu have a Power Cooperative?

Throughout the first year of operation, the local energy service company will provide free maintenance and train members of the local communities to operate and maintain the power station. "This the first-ever power cooperative for Vanuatu's last mile communities.
