

Vietnam outdoor power supply procurement

Overview

Can businesses buy power from power generators in Vietnam?

Vietnam issued a decree on Direct Power Purchase Agreements on July 3, 2024, clearing the way for businesses to buy power directly from power generators. The decree was a long time coming and has been touted as a critical component to developing Vietnam's electricity network.

How does the power market work in Vietnam?

Vietnam's power market operates on a 30-minute trading system, with prices updated every half hour. This Full Market Price (FMP) reflects the real-time cost of power and is used to settle payments in the wholesale market. The FMP includes: System Marginal Price (SMP) – a dynamic price based on supply and demand.

Is Vietnam a good place to invest in wind power?

Vietnam's wind power industry has emerged as a key component of the country's renewable energy strategy, driven by favourable natural conditions and government incentives. With over 3,000 kilometres of coastline and high wind speeds, Vietnam has significant potential for both onshore and offshore wind energy development.

Does Vietnam have a competitive power system?

Vietnam's move toward a competitive power system took a big step forward with the launch of its Wholesale Electricity Market (VWEM) in 2019. In this market, state and private generators sell electricity through a centrally coordinated system. Prices are based on real-time supply and demand, bringing more transparency and efficiency to the sector.
