

Which roofs can be equipped with photovoltaic panels

Overview

Solar panels can be installed on almost any type of roof—as long as there's access to sunlight. Whether your home has asphalt shingles, tile, wood, or metal roofing, solar is a smart and sustainable home upgrade. What Types of Roofs Can Solar Panels be Installed On?

Short answer: most of them! Can solar panels be installed on a commercial roof?

If you're considering installing a residential or commercial solar panel system, you might wonder if your roof type is appropriate for a solar installation. The good news is that solar panels can be installed on just about any roof type, but the installation process and mounting hardware might vary from material to material.

Which roof is best for solar panels?

No one type of roof is best for solar panels – mounting solutions exist for just about every roof out there. Some roofs will cost more to mount solar panels on. This is due to the different equipment installers need to use. Start comparing customized solar quotes today on the EnergySage Marketplace.

Can you put solar panels on a tile roof?

Tile roofs can break when solar energy systems are installed. Therefore, you will need to contact an experienced contractor to put solar panels on this roof. One of the greatest roof types for solar panels is tar and gravel. But since they're flat, you'll need more brackets to get the right slopes.

Can you put solar panels on a flat roof?

Therefore, you will need to contact an experienced contractor to put solar panels on this roof. One of the greatest roof types for solar panels is tar and gravel. But since they're flat, you'll need more brackets to get the right slopes. Additionally, these roofs include proper seals that may last up to 25 years and lower the chance of leaks.

Do solar panels work on metal roofs?

Depending on the type of metal roof you have, installations will differ slightly, but the big takeaway is that solar panels work well on metal roofs. If you have a standing seam metal roof, your solar installer won't have to drill holes in your roof, as panel mounts can be clamped to the raised seams.

Are tar and gravel roofs a good choice for solar panels?

Tar and gravel rooftops are the most cost-effective and ideal for installing solar energy systems. These rooftops don't have the potential for leaks or fractures. Although the solar panel needs a precise angle for optimum efficiency, you will need to add additional brackets as the tar and gravel roofs are flat.
